Abstract

Coextruded, heatsealable and peelable polyester film, processes for its production and its use

5

10

The invention relates to a coextruded, transparent, biaxially oriented polyester film comprising a base layer (B) and a heatsealable top layer (A) which is peelable from APET, the heatsealable and peelable top layer (A) consisting of

- a) 60-97 % by weight of polyester and
- b) 3-30 % by weight of a polyester-incompatible polymer (= anti-PET polymer)

based on the mass of the top layer (A),

15 and

- c) the polyester being composed of 25-95 mol % of units which derive from at least one aromatic dicarboxylic acid and 5-75 mol % of units which derive from at least one aliphatic dicarboxylic acid, the sum of the dicarboxylic acid-derived molar percentages being 100, and
- d) the layer thickness of the top layer (A) d_{A} being from 0.7 to 2.5 μm .

20

The invention further relates to a process for producing the film and to its use.
